

DYNA-TEK® Owl

High Risk Category

The Dyna-Tek® Owl provides exceptional pressure re-distribution via it's "Owl contoured design".

A uniquely designed postural management product, this cushion is made specifically for users considered to be at High Risk of pressure ulcer development.

It is designed predominantly for use in a wheelchair, housing the ischial tuberosities within it's circular surface in areas where skin is normally vulnerable to breakdown. The design also takes into consideration pelvic tilt aspects amongst other key areas and provides the ultimate combination of pressure care and patient comfort.

Ischial tuberosities protected by round "Owl" design

Unique "Owl" surface design - the round owl "eye" area houses and protects the ischial tuberosities and creates pelvic stability

Profiled foam surface - provides excellent pressure redistribution

Quality CME foam - prevents bottoming out and assists patient transfer

Multi-stretch vapour permeable cover - reduces shear and friction forces

Cover impregnated with anti-fungal agent - assists infection control

Non-slip base - Aids moving and handling, with improved patient safety

Sag compensator available
