

QUICKIE Iris

The Quickie® IRIS™ features up to 55° of Intelligent Rotation in Space Technology, and is one of the lightest tilt-in-space wheelchairs available on the market. Intelligent Rotation in Space technology means the seat frame rotates around the user's center of gravity. This results in a smooth tilting motion that is easy for you to control and allows for the shortest possible wheelbase for easy manoeuvring. The IRIS features rotation ranges that can be set to achieve up to 45° or 60° of posterior rotation for superior positioning.

The convenient caregiver options include a Foot Release Tilt Actuator for cable-free tilting and the hands-free Attendant Wheel Lock which also uses a foot pedal to engage. Standard with every IRIS, the Angle Adjustable Stroller Handle can be easily adjusted to differing caregiver heights for easy handling.

- Tilt-in-space frame style - 40° or 55° tilt range
- Rocker Arm designed for smooth transitions
- Fold down back canes for improved portability
- Caregiver options: Foot release tilt actuator, hands free attendant wheel lock
- Angle adjustable stroller handle
- Low seat to floor height for improved table access and enhanced floor access for foot propulsion
- Mono Backrest System - single post backrest mounting and folds forward for easy transport

Rocker Arm for smooth transitions up to 55° rotation

Interchangeable swing away or elevating hanger

Mono Backrest System - single central post
