

SOFTFORM Maxiglide

High Risk Category

The Maxiglide provides pressure reduction and patient comfort while its patented design allows the top patient supporting surface to remain in position while the bottom surface moves and glides during bed profiling, thereby reducing the potential for tissue shear and friction.

The patented glide system allows the mattress to fully conform to the bed frame to optimise the properties of a profiling bed.

- Top surface remains under patient reducing shear
- No turning or rotation required
- High frequency welded seams for better infection control
- Full length flap conceals zip
- Deep contoured insert pad for enhanced pressure care area to optimise pressure reduction
- Clinically assessed to not impede CPR
- Two-way stretch PU waterproof cover
- Cover fabric conforms to contoured foam castellations to reduce fabric cover rucking
- Toughened PU coated base prolongs mattress longevity

Patented Glide system allows mattress to fully conform to bed frame
