

# Symmetrikit Chair

Sitting properly takes effort to maintain a balanced position. If you are incapable of supporting yourself, you may need a little bit of functional support or a more complex solution.

The modularity of the Symmetrikit Chair can help you by providing the amount of support that is just right for you.

The range of height, width and depth adjustments available on the components, means the chair can be completely personalised.

The fingerform back option involves individual “fingers” which can be adjusted up, down, in, out, set to one side or even to pivot allowing you to follow the spine and subsequently support the whole body.

The versatility of this chair extends beyond just great support for relaxed sitting or lying. The Symmetrikit chair can be quickly repositioned to a more upright position

for meal times, tilted head down for postural

drainage and even used “back to front” as a wedge for prone stretching.

- Modular design for maximum adjustability
- Perfect for rest, work or play
- Tilt in space feature for comfort and pressure relief
- Choice of supportive backs, including fingerform
- Easy flip footplate and quick release fold down arms
- Multifunctional: chair, bed, wedge, side lying
- Optional accessories such as head rest, pommels, foot blocks, etc. for further customisation

The Symmetrikit Tiltrite chair comes standard with manual adjustment.

A 2-function (tilt | leg elevation) or 3-function (tilt | recline | leg elevation) powered chair option is also available.

	Seat Width	Seat Depth	Armrest Height	Seat Height	Leg length (with footrest)	Seat Tilt	S.W.L.	Warranty
