

# ALBER SMOOV Power Assist

The SMOOV one is an electric power assist drive unit designed for active wheelchairs, significantly increasing the driver's mobility and flexibility.

Its discreet, unobtrusive design is extremely swift, able to turn itself on the spot while still remaining high-performance and efficient.

The drive unit attaches to a small bracket fitted to the crossbar on rigid-frame wheelchairs. It can be used on folding wheelchairs with a wheel camber up to 2° by using an adapter axle. The intuitive docking and undocking of the drive unit is made even easier by its light weight and the ergonomic and wireless control unit.

drive unit is made even easier by its light weight and the ergonomic and wireless control unit.

- Ergonomic carry and release handle
