

The Niklas Portable Gantry is designed to work with stationary or portable lift systems.

The Altair portable lift is well suited to both facility or home care environments.

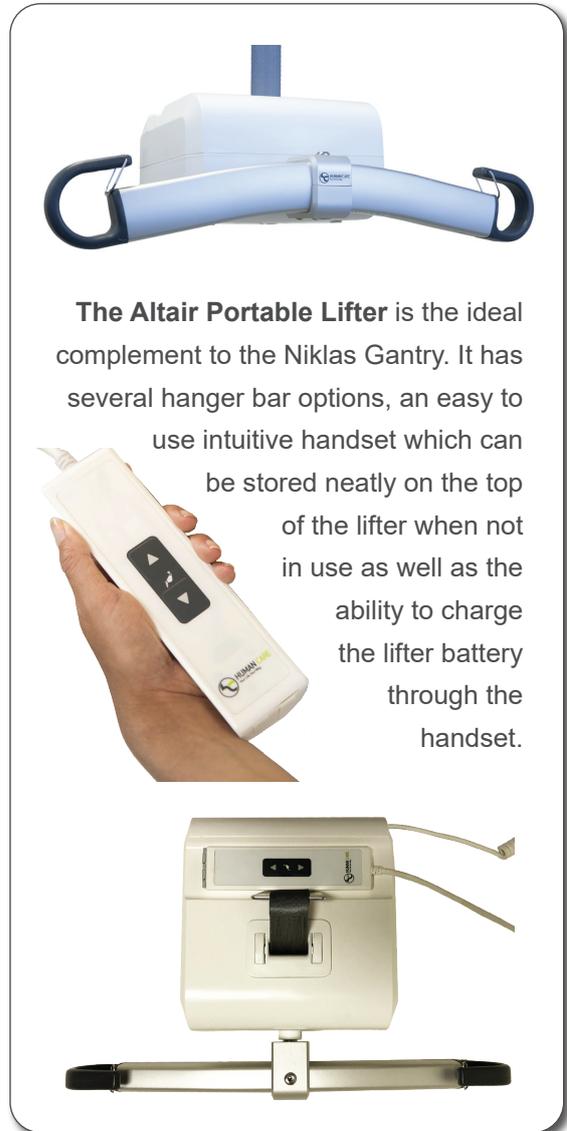

This lightweight lift has a discreet, modern design offering unbeatable comfort.

The 3-point suspension offers even weight distribution and an elongated sitting position. Compatible with loop slings.

The soft-start, soft-stop and constant lifting speed and direction makes lifting a comfortable experience for patients regardless of their weight.

The Altair offers two-speed lifting, a high battery capacity and the added convenience of being able to charge the battery through the hand control.

The 2-point hanger bar is available in a selection of widths to best suit the specific requirements of the user.

The Altair Portable Lifter is the ideal complement to the Niklas Gantry. It has several hanger bar options, an easy to use intuitive handset which can be stored neatly on the top of the lifter when not in use as well as the ability to charge the lifter battery through the handset.

Lifting Situations

Can be placed over a bed, toilet or wheelchair for transfers or repositioning, using a ceiling lift with a sling. Also suitable for lifting to or from the floor.
