

Day Air Chair - Bariatric

The Bariatric Air Chair is specifically designed for use in high care environments where patients are at risk of pressure sore development. The chair utilises a combination of soft high density foam and strengthened air cushions to ensure a high quality of pressure care.

The chair is highly adjustable with arm rests and head wings that can be lowered below seat height for side transfers and height adjustable footrest pads. The back rest and leg rest both tilt as well as having the full chair tilt-in-space function.

The four large castors are individually lockable and with rear push handles and controls, the chair can be easily pushed, adjusted and locked in place by carers.

The sturdy design ensures trouble-free, reliable use.

- Sturdy, powder coated extra durable frame
- Four-way stretch material covers for additional pressure relief and skin tear mitigation
- Higher density foam and wider 60cm seat width
- Water resistant to prevent liquid ingress
- Easy to remove covers for cleaning and replacement
- Height adjustable and removable headrest
- Included accessories:
headrest | footrest pads | meal tray
- Storage slot for meal tray on side of frame

Removable meal tray with convenient side storage slot on frame.
