

# Novis LiftAid 180 Hoist

The LiftAid 180 is a lightweight, mobile lifter that is easy to use and allows lifting and transferring from floor, bed or chair. The soft start/stop function and low lifting height provides optimum comfort and safety for both patient and carer.

The upright mast with angled boom has three height settings so it can be set to best match environmental and lifting needs. The U-shaped base is electrically operated while the wide flanged front leg opening offers improved stability and easier access around furniture. The mast can also be removed from the base without using tools so that the unit can be more easily transported and compactly stored.

The handheld controller features simple push buttons for raising and lowering the lifter as well as opening / closing the base legs.

Comes standard with 2-point yoke spreader bar with quick release clips. It also offers the option of a pivot frame for enhanced patient positioning during lifting.

Optional Pivot Frame

- 3 height settings
- tool-less adjustment
- Quick release hook system
- Electrically operated base
- Handheld controller
- Emergency stop
- Manual emergency lowering
- Optional Pivot Frame
- Compatible with range of slings

Tool-free removable mast for easier transport and more compact storage
