# Quattro Acute

The Quattro Acute mattress replacement system boasts several specialised features to provide optimum pressure sore prevention and treatment.

The AUTOSUPPORT™ feature automatically adjusts and equalises pressure within each of the cells to ensure that support, posture and therapy are constantly maintained at optimum levels

in response to patient weight, movement and position.

The **orthodifferential support (ODS™)** feature provides optimum internal cell pressures to accommodate varying body weights and shapes by supporting smaller, lighter patients on the softer central area of the cell and larger, heavier patients on the firmer outer edges as well as providing a feeling of security for the patient.

Active 1-in-4 cell cycle

Ortho-Differential Support results in firmer outer edge

Multi-Stretch cover with welded seams  
- waterproof | moisture-vapour permeable

Microclimate management - "low air loss" feature reduces moisture build-up & lowers humidity level

Fully launderable - reduce risk of cross contamination

CPR Function - rapid deflation valve removes air from mattress to enable CPR procedures

Transport Facility - unpowered support up to 4 hours

### DEEPCELL Therapy™

The unique design of the air cells of this 24cm deep mattress combined with the 1-in-4 active cell cycle means the cells of the Quattro Acute run at **lower internal pressures**, thereby minimising the pressure applied to the patient's skin and subcutaneous tissues during the cycle.
