

SYMMETRIKIT

SYMMMSLYDE®

**The ONLY slide sheet
and positioning system
that WORKS as ONE**

Slides, turns and maintains position

Symmmslyde® makes it easy for a single carer to both achieve and maintain a comfortable supported position.

Sustained side lying, supine, prone or semi-side lying positions are all possible so reducing the need to constantly re-position. It can even be used by those who need to sit up in bed.

This combined approach really does lighten the load and reduces the effort needed to position your client.

Slide

Either a single carer working with a hoist or with a carer at either side. Start by using the built in slide sheet to move across.

...Roll

Raising the hoist or using the built-in straps to do a "log roll" allows the Symmetrisleep® supporting brackets to be put in place. The slide sheet is automatically disabled.

...Position

Further Symmetrisleep® elements can be quickly added so that your client can be comfortably and securely supported in side lying either for sleep or super efficient hygiene changes. Moving back into semi side lying or supine lying can easily be done by one carer without the hoist.
